Github repositories explorer
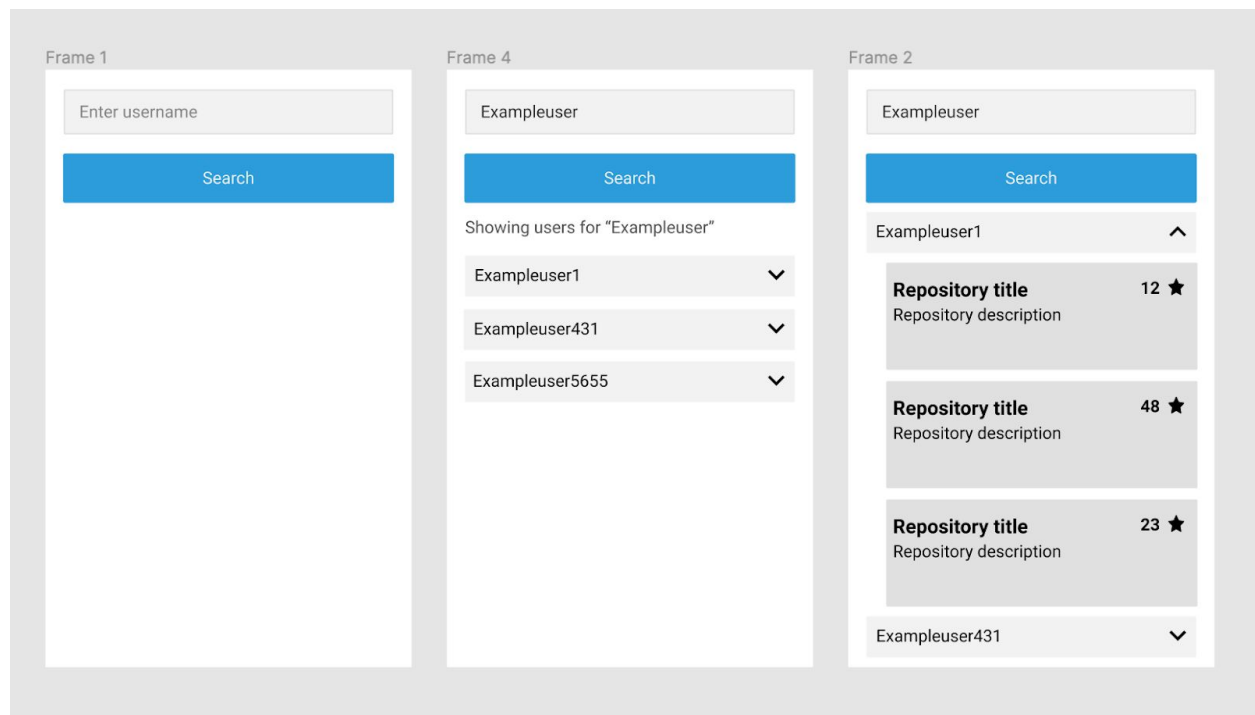

Description

Create React application which integrates with github.com API and allows user to search for up to 5 users with a username similar to the value entered in text input and then on click, display repositories for selected GitHub user

API docs URL: https://developer.github.com/v3/

Designs

Requirements

- Use React
- Use redux as state container for the API response
- You can use other libraries of your choice (forms, styling, testing, etc.)
- The app should be available as a public GitHub repository with readme describing how to start it
